

## QUEENSLAND.

REPORT FROM THE SUPERINTENDENT OF ELECTRIC TELEGRAPHS  
ON THE CONDITION OF HIS DEPARTMENT.

Presented to both Houses of Parliament by Command.

## TO THE HONORABLE THE POSTMASTER-GENERAL.

Electric Telegraph Department,  
Superintendent's Office,  
19th May, 1876.

Sir,

I do myself the honor to place in your hands my customary Annual Report on the Telegraphic Service of Queensland.

At the beginning of 1875, the colony possessed 3,616 miles of line, 4,501 miles of wire, and 83 stations; at the commencement of the current year it possessed 3,869 miles of line, 5,339 miles of wire, and 112 stations in effective working order and daily operation; the establishment consisting of 239 officers and servants of all grades on the permanent staff, with from 20 to 24 supernumerary workmen employed on construction and maintenance duty. Further particulars on these heads will be found in detail in appendices.

Since the date of my last Report, the following

## EXTENSIONS OF LINES

have been completed.

*From Brisbane, via Beesleigh and Nerang, Coonabein, to the Boundary of New South Wales=97 miles.*

This line is built mostly of ironbark, and was finished on the 25th June, 1875, stations at Beesleigh and Nerang having been opened earlier, as previously notified. Serving as a duplicate inter-colonial route, it has already proved exceedingly useful during interruptions on the direct line to Sydney.

*Gympie to Toowoomba=92 miles.*

Constructed of ironbark and bloodwood, and completed 6th May last.

*Charleville to Toowoomba=122½ miles.*

Built entirely of cypress pine, and brought into use 26th August, 1875. The completion of this section furnishes another route via Charleville and Clermont to Nebo, a station on the main line 192 miles north of Rockhampton, and will be of extensive advantage in the despatch of northern business.

*Maryborough to Inskip Point=40½ miles.*

This branch is constructed of various, but the best descriptions of hardwood. It joins the Gympie line four miles south of Tiaro, and runs thence on the old poles to Maryborough. Finished 8th September last year; it is a great convenience in reporting vessels crossing Wide Bay Bar.

*Camasville to Rathfriland, New South Wales Border=70 miles.*

This line, built entirely of cypress pine, was completed on the 1st April, this year.

*Cooktown to Myrtleton=148½ miles.*

Built of the best description of hardwood, was completed and opened on 25th April last.

*Spanish to Toowoomba.*

A fifth wire has been added to this line. It is 68 miles in length, was placed in circuit 28th May, 1875, and suffices as a means of direct communication between Brisbane and the Western Stations.

*Brown to Waterloo, 60 miles south of Cardwell.*

An additional wire has also been stretched between these stations, for the purpose of relieving the overcrowded lines north of the former. Its length is 152 miles, and it was made available 25th March last.

## NEW STATIONS.

During the past year the following new Stations were opened on the date assigned against each respectively:—

Townsville ... ..	6th May, 1875.
Cape Capricorn ... ..	1st September, 1875.
Toowoong ... ..	11th October, 1875.
Sea Hill, Keppel Bay ... ..	1st November, 1875.
Inskip Point ... ..	20th November, 1875.
Nive Downs ... ..	22nd January, 1876.
Cooktown ... ..	25th April, 1876.
Maytown ... ..	26th April, 1876.
Palmerville ... ..	8th May, 1876.
Tate ... ..	14th May, 1876.
Walsh ... ..	8th May, 1876.
Fernvale ... ..	26th May, 1876.

## EXTENSIONS IN PROGRESS.

*Charleville to Caversham*—126 miles.

The timber work, which is entirely of cypress pine, is completed, and the line will probably be opened during June next.

*Spring to Nonyng*—89½ miles.

It is expected that this extension will also be completed and opened for business in all next month.

*Janetown Creek (Gyepentoria line) to Maytown—Palmer Diggings District.*

The estimated length to its union with the Cooktown line is 173 miles; and from thence the wire will be stretched for 19 miles on the Cooktown poles. 142 miles of the line is already completed, and in all probability the whole will be finished within, say, six weeks from the present date. In the meantime, however, it will be made available as far as practicable by running a horse-express over the unfinished portion—between the Walsh and Palmerville.

*Charleville Town to Dalrymple*—estimated length, 30 miles.

A contract for construction of this line, within three months, was entered into 18th March last.

*Trunk to Blackell*, estimated length—85 miles.

A contract to execute this work within six months from 5th April, has likewise been entered into.

## WORKING OF LINES.

The lines, both in the Northern and Southern Districts, have worked remarkably well throughout the year; few interruptions occurred, and the insulation still continues in a satisfactory condition.

Communication with Sydney direct, over a distance of about 700 miles, has lately been established by means of Wheatstone's automatic instruments, which work well in almost any kind of weather. If arrangements are made to regularly employ them, much time and labor will be saved, and Tenderfield as a repeating station may be dispensed with. The speed obtainable by these instruments is regulated by the distance traversed—that is to say, the less the distance the greater the speed, the average ranging from 20 to 120 words a minute. With the line in good working order, 60 words per minute could be transmitted between Brisbane and Sydney, whilst twenty words would be the average by the Moree.

Three sets were ordered from England in January last for use on the northern line, and so soon as they are established in use, I hope to work with Bowen, without repeating at Rockhampton.

The cables in Moreton Bay worked well during the year, with exception of the Cleveland-Dunwich section, wherein a defect in the insulation was noticed a few days back, which, however, I trust to remedy shortly. The Hervey's Bay line gave some little trouble, and the short section between Curtis Island and the main land must ere long be renewed.

Four maintenance parties were constantly employed during the year—two in the northern and two in the southern districts.

## SHIPPING AND METEOROLOGICAL REPORTS.

These have been regularly transmitted throughout the year. This free business is rapidly increasing, and on the lines chiefly in demand materially impedes legitimate traffic. The expediency of charging at reduced rates will be alluded to later on.

## RECEIPTS AND EXPENDITURE—1875.

Detailed statements are contained in the appendices.

The following summary exhibits the cash revenue, and revenue value of public service messages, together with the working expenses of the department in 1875.

REVENUE.		
Cash account, Local collections ... ..	...	435,885 9 2
Due .. International .. .. .	...	5 19 11
.. International ... .. .	...	102 17 6
Equal to Cash ... .. .	...	436,044 6 7
Value of Service Messages ... .. .	...	10,085 19 10
Total revenue from all sources ... ..	...	446,130 17 5

EXPENDITURE

I am not, however, prepared at this time to propose any alteration in the Queensland tariff of charges, with the exception of a slight modification in connection with shipping intelligence. This, as you are aware, is under existing departmental regulations forwarded free from all to all ports in the colony. Allowing sea-board stations to continue to furnish meteorological and shipping intelligence to their respective ports, I would suggest that the arrangement should otherwise be discontinued, and now that the charges are at their maximum merely nominal, shipowners, agents, and others interested wishing to obtain information respecting the weather, state of the sea, or arrivals or departures of vessels, should, at least, be required to pay Press rates. A scale so low for special information could hardly be considered oppressive, whilst the relief the charge would afford to the lines, encumbered as they are by an increasing free business of little interest to the general public, would be considerable.

#### COMMUNICATION WITH NEW ZEALAND.

A cable connecting Australia with New Zealand having been successfully laid, was open for business on 21st February last. Carried from Botany Bay, five miles south of Sydney, New South Wales, to Blind Bay, near Nelson, New Zealand, its total length is about 1,200 miles. The deep-sea portion weighs, say, 1½ tons per nautical mile, and the other types laid in shallow water, two, four, and twelve tons respectively. It was manufactured by the Telegraph Construction and Maintenance Company, of London, and is the property and worked by the Eastern Extension Australian and China Telegraph Company, with very perceptible and generally admitted benefit to intercolonial trade. The charges by this line from Queensland stations to any part of New Zealand are half a guinea for ten words, and one shilling for each additional word—address and signature counted as part of the message.

#### INTERNATIONAL COMMUNICATION.

Owing to some misunderstanding in London, the proposed cable between the terminus of our land line at Kimberley, on the shore of the Gulf of Carpentaria, and Singapore, has not been laid. This unsatisfactory and much-to-be-regretted result of the protracted negotiations alluded to in previous reports is entirely attributable to New Zealand having withdrawn from the agreement entered into by the Intercolonial Conference held at Sydney in 1878. However, Messrs. Siemens' agent, who was lately in Brisbane, is again endeavoring to revive the project, and is hopeful of ultimate success. The International line, via Port Darwin, Java, and British India, has not worked altogether satisfactorily during the last twelve months, by reason of serious faults in the ocean cables; indeed, direct communication with Europe has been subjected to interruptions for some time past by breaks in the Suez-Bombay and Peking-Madras sections, and is now entirely suspended by a defect between Port Darwin and Java.

These accidents, with the prospect of long continued interruptions, and, at best, a return to a precarious communication so long as it is contingent solely on existing means, has at length aroused public attention, both at home and throughout the adjoining colonies, as well as an anxious desire for a second and independent line. That our land lines are peculiarly available, I have endeavored year by year since 1865 to point out; that a duplicate is now urgently required there can be no doubt, any more than that the cordial co-operation of New Zealand and all the Australian Colonies is indispensable to its provisions.

In connection with international communication of a more distant date, I would here refer to the mission of the U. S. war-ship "Tuscarora," which arrived in Moreton Bay 16th February last, after a successful marine survey for the projected cable between San Francisco and Brisbane, mentioned in my report of 1873. The line of soundings was taken from San Francisco, via Honolulu, Enderby Island in the Phoenix Group, Yasawa, Fiji, and South of New Caledonia, to the proposed Brisbane terminus. Commander Miller informed me the route was most suitable, and kindly allowed me to inspect a carefully executed diagram of the ocean bed throughout the line of soundings, which exhibited most promising evidence in favor of the object in view. Between Honolulu and Cape Moreton, 167 casts were made, the deepest attaining to 3,448 fathoms.

In conclusion, it only remains for me to advert to another project, namely, the proposal to unite the Cape of Good Hope with the telegraphic systems of the world, by means of a cable from Aden, via Mauritius, to Port Natal, and thence by land line to Grahamstown, the eastern terminus of the Cape Colony telegraphs. I need not, perhaps, enter further into detail, but am led to allude to the design in the belief that, when carried out, it is likely to affect Australian interests advantageously.

I have, &c.,

W. J. CRACKNELL, M.S.T.E.,

Superintendent of Electric Telegraphs.

## APPENDICES.

## ELECTRIC TELEGRAPH DEPARTMENT.

Table No. 1.
